

## METHODOLOGICAL NOTES

The publication presents results of the food, beverages and cigarettes consumption statistics for 2020. In order to improve user-friendliness it includes, among others, also time series beginning with 2011.

Totals, indices and calculations in the commentary are based on non-rounded figures.

The data for food and beverages consumption were obtained using the balance method applied to the following statistical information:

- Animal production statistics 2020
- Final harvest figures 2020
- Production of selected industrial products 2020
- Initial and final stocks in agricultural enterprises
- Initial and final stocks in food processing enterprises
- Import and export of food products based on external trade statistics of the Czech Statistical Office (as at 1 September 2021)
- Self-supply of food products

Further data used for the calculation were obtained from the Ministry of Agriculture, the Institute of Agricultural Economics and Information, particular food producers' unions and other organizations.

No obligatory classification standards exist for food consumption statistics either on national or international (Eurostat) level. Starting with the publication "Food consumption in 2001" the Czech Statistical Office has changed the order of published food commodities in order to improve the data use. Particular food consumption items were arranged in line with first two divisions of the CZ - COICOP classification (the Czech version of the international COICOP standard; designed to enable international comparisons and used also in the Household Budget Surveys statistics).

Food consumption items cover two main divisions: 01 – Food and non-alcoholic beverages, 02 – Alcoholic beverages and cigarettes. The divisions break further down into groups and subgroups.

The food, beverages and cigarettes consumption data were calculated as average per capita figures; mid-year population (as at 1 July of the given year) is used. The table shows the mid-year population in 2011–2020:

Year	Mid-year population	Year	Mid-year population
2011	10 496 672	2016	10 565 284
2012	10 509 286	2017	10 589 526
2013	10 510 719	2018	10 626 430
2014	10 524 783	2019	10 669 324
2015	10 542 942	2020	10 700 155

Food self-sufficiency, or self-sufficiency in food production, is expressed as a proportion of domestic production and domestic consumption. The published figures are calculated from the shares of per capita production and per capita consumption for each item, converted into percentages.

### Symbols used in the tables

- . data unavailable
- x not applicable
- 0 less than half the final digit shown and greater than real zero
