

INTRODUCTION

The publication *Energy Demand of Selected Products Production 1988 – 2022* includes processed data from the statistical report *EP 9-01 (Annual Report on the Fuels and Energy Demand in Selected Products Production)* for the period of 1988 – 2022. The current publication also includes data for period of 1988 – 1991, which were processed from statistical report *E 4-01 (Annual Report on Energy and Fuels Consumption)* and formerly published in the publication *Energy Demand of Selected Products Production 1988 – 1991*. Combined, these datasets create time series enabling to compare the evolution of energy and fuels consumption in the production processes of selected products.

The sample of respondents is based on their main economic activity, as stated in the Registers of Economic Entities serviced by The CZSO. Through the whole processing period the methodology, range of files and scope of respondents in partial items of publication have undergone certain changes. The reason for these changes was to find an optimal scope and form of statistical reports *EP 9-01* processing. Therefore values of production-specific energy consumption of some items might be varying in time of these changes implementation. Due to possible changes in the scope of the sample of respondents, inability to make certain items public might occur to preserve the confidentiality of statistical data.
