

Introduction

The publication traditionally contains the results of production statistics collected via year questionnaire Prum 2-01, which is filled-in by all enterprises (both legal and natural persons) with prevailing industrial activity and employing 20 or more persons. Since 2000 the production survey is based on eight-digit PRODCOM nomenclature, more precisely on its ten-digit national version. Due to confidential data protection the complete results cannot be published. However, the following pages contain information on all non-confidential products with non-zero production.

Due to changes in the applied nomenclature and also with regard to the needs of long time series the publication is divided into two parts:

Part A *contains the most recent (2012) total production and production sold data and their indices according to the list of products valid for the reference year (CZ-PRODCOM 2012 , which is the national version of PRODCOM 2012). This part contains both preliminary 2012 data and revised 2011 results.*

Part B *presents long-term time series of selected word defined aggregates, which bridge changes in the used list of products.*

The CZ-PRODCOM list, which is used for production survey and which is used in the part A of this publication, reflects the new system of economic classifications (NACE Rev.2/CPA 2008.) Its codes therefore differ from the PRODCZECH list, which has been used previously.

Symbol used in the tables:

- i.d.* *The figure cannot be published due to protection of individual data*
- .* *The figure is not available*
- x* *The figure is not applicable*
