Methodological notes

The Administrative Districts of Municipalities with Authorized Local Authority (AD MALA hereinafter) were stipulated by the Decree of the Ministry of the Interior, already mentioned in Preface.

The Nomenclature of Municipalities with Authorized Municipal Office was introduced by Communication of the Czech Statistical Office No. 471/2002 Coll. of 29 October 2002, establishing the Nomenclature of Municipalities with Extended Powers, the Nomenclature of Municipalities with Authorized Municipal Office and the Nomenclature of the Prague Administrative Territories, which took effect on 1 January 2003.

The Yearbook contains data adjusted to territories of AD MALA effective on 1 January 2014. There are a total of 388 AD MALA, Prague and military domains (Boletice, Brdy, Březina, Hradiště a Libavá) are not included. The code stated behind the name of the district is the code of the district according to the classification CZ-LAU1, the code behind the name of the region is the code of the region by the classification CZ-NUTS3.

Changes in the numbers of municipalities in AD MALA result from merging or separating of municipalities.

All data refer to the resident population of AD MALA, irrespective of citizenship. Since 2001, the figures include (in accordance with the Population and Housing Census 2001) foreigners with long-term stay (i.e., the stay based on visa over 90 days, as stipulated by Act No. 326/1999 Coll.) and foreigners with granted asylum status (in compliance with Act No. 325/1999 Coll.). Since 1 May 2004, in accordance with amendment No. 326/1999 Coll., the figures include citizens of the European Union with temporary stay on the territory of the Czech Republic, and citizens of other countries with long-term stay. The data also contain information on events (marriages, births and deaths) of permanent residents of CR that occurred abroad.

The population as of 31 December of given year is equal the population as of 1 January of the next year. And, the population as of 31 December of given year is computed as the population as of 1 January of given year plus total population increase. It is not true for years in which the population census was held, when the stock as of 31 December of the year before census is not equal the stock as of 1 January of census year. Here it refers to the Population and Housing Census 2011 - the population as of 1 January 2011 differs from the population as of 31 December 2010.

The disagreement between the population as of 31 December and 1 January by AD MALA could also be due to the shifts of municipalities between AD MALA as well as to the extraordinary adjustments of the municipality population stocks. In the following overview the adjustments of AD MALA population between 31 December of given year and 1 January of the next year are listed.

Year	AD MALA	Code	Adjustment
2006	Benešov	21011	-137 persons
2006	Týnec nad Sázavou	21013	+137 persons
2006	Havlíčkův Brod	61022	-2 persons
2006	Světlá nad Sázavou	61112	+2 persons

Definitions of marriages, divorces, births, abortions and deaths and the derived indicators are given in the Demographic Yearbook of the Czech Republic (code 4019-13).

Migration is the change in a place of permanent residence from municipality to municipality within the territory of the Czech Republic or across the borders of the Czech Republic (external migration). The statistics measures the number of moves, not the number of migrants – one person could move twice or more times. The term 'immigrant' is used for immigrant into a AD MALA, the term 'emigrant' for emigrant out of AD MALA, in both cases refer to movement across the AD MALA line (so as including international migration). Internal migration refers to the migration between municipalities within one AD MALA (i.e. not

cross AD MALA line). There is no internal migration within AD MALA 42132 Krupka, 51052 Hodkovice nad Mohelkou, 62011 Adamov, 62031 Brno, 71071 Hlubočky a 81192 Vratimov, as only one municipality forms this AD MALA.

Symbols used in tables

- *The symbol of dash in place of a figure indicates that the phenomenon did not occur.*
. *The symbol of dot shows that the figure is not available or cannot be relied on.*
x *The symbol of small cross shows that the figure is not applicable.*
0 *The symbol of zero in a table designates figures smaller than half of the unit of measure chosen.*
