Output of the agricultural industry (OAI) at current basic prices presented in total an amount of 128 068.2 mil. CZK in preliminary results for 2013. Crop output reached to 75 161.8 mil. CZK and animal output reached to 46 895.8 mil. CZK. The rest of the total OAI was made up by the agricultural work supplied to the other unit, that were the agricultural services output (3 522.9 mil. CZK) and non-agricultural secondary activities (inseparable) in the amount 2 487.6 mil. CZK. There were increase of harvest of cereals in total and of industrial crops in total, especially of wheat and rape, but the prices decreased. With potatoes there was the opposite situation. Crop output increased by 4.7 % year-to-year. The total animal output was higher by 4.2 % than in the year 2012. Production of cattle and poultry dropped but it was compensated for higher prices. With the exception of milk where production and average prices increased compared to the year 2012.

Output of the agricultural industry at the current constant prices of 2000 amounted to 103 564.5 mil. CZK, composed of crop output (sharing in with 56 555.3 mil. CZK) and animal output (contributing with 43 372.4 mil. CZK).

Crop output 2013 shared in OAI at current basic prices by 58.7 %; dominated with cereals (42.0 %) and industrial crops (26.9 %). Animal output shared in the total output by 36.6 % with the major proportion of milk output (47.8 %) and breeding of pigs for slaughter (20.4 %).

Intermediate consumption (IC) created 72.9 % of the total agricultural output (without subsidies on products). Feedingstuffs represented 36.8 % of the intermediate consumption.

Income from agricultural activity per full-time labour equivalent (1 AWU), as it is measured by income Indicator A, increased by 1.73 % in 2013. The deflator (the implicit price index of GDP at market prices), estimated by Eurostat experts for the year 2013 was 101.24 %.
