The publication "Energy demands of selected products production 1988 – 2013 comprises results obtained from the processing of the statistical report EP 9 - 01 (Annual report on fuels and energy consumption for selected products production) in the period 1992-2013. Furthermore, data are cited from the CzSO publication of the same name from 1993 relating to the period 1988-1991, thus forming a series of results enabling to make comparison of energy consumption for selected products production development. For these purposes there were processed, for the period 1988-1991, data from the report E 4 -01 (Annual report on fuels and energy consumption).

The sample of respondents, like in previous years, was based on the Business Register run by the Czech Statistical Office (CzSO) by their main activity. During the processing period a methodology of processing, scope of files and number of respondents in partial items have undergone changes to a certain extent. The reason was to find an optimal scope and form of statistical reports EP 9 - 01 processing . That's why values of specific energy consumption concerning some products are varying just in the period of these changes.
