

D Public administration

Since 2003, the Czech Statistical Office has been conducting periodic annual surveys on ICT usage in the public administration. The pilot survey was carried out in 2002. The present survey fully covers all state administration offices, regional offices and municipalities. The main focus of the survey is to monitor access to ICT by public administration (PC, internet, LAN, broadband, e-signature), human resources, infrastructure and usage of ICT (web sites, on-line services) and citizens' access to ICT within organizations (PIAP, information kiosk).

Notes:

Target population: Survey fully covered all state administration offices, regional offices and municipalities

Sample: Organizations by legal form:

- 376 State administration offices (ministries, central state administration offices, courts, labour offices etc.)
- 13 Regional offices
- 6 300 Municipal offices (incl. Parts of Prague)
 - Municipality (or part of Prague) with 500 and more citizens
 - Municipality with less than 500 citizens

Questionnaire structure:

Questionnaire designed for state administration offices, regional offices and municipalities with 500 or more citizens covered the following:

- access to information and communication technologies
- usage of information and communication technologies to cover needs of organization
- citizens' access to information and communication technologies made available by public administration (public internet access point, information kiosk)
- web sites and services available on-line for citizens and enterprises
- electronic purchasing of goods and services

Questionnaire designed for municipalities with less than 500 citizens was shorter and covered only basic indicators, mainly focusing on infrastructure of ICT and citizens' access to ICT within organization.

Definitions:

- **Information kiosk** – computer at public place (e.g. town hall), which allows citizens to view information on public administration, culture, health, education, public transportation, maps etc.
- **Czech POINT** – The objective of the CZECH POINT project is to create contact points through which the general public can obtain transcripts and information statements from the government's central register. The main aim of this project is to reduce the excessive bureaucracy for citizens in relation to public administration.

Other data source:

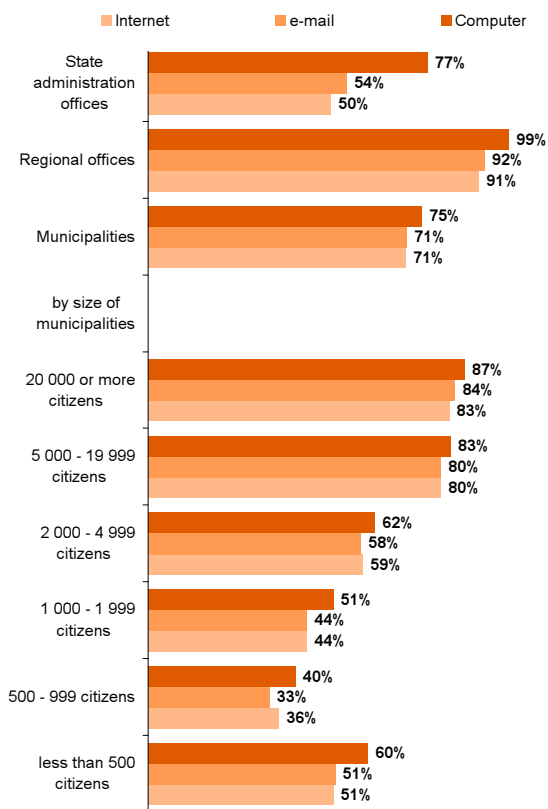

- **ICT in libraries** – National Information and Consulting Centre for Culture
- **Individuals** – statistical survey on ICT use by Czech households and individuals
- **Enterprises** – statistical survey on ICT use in the Czech business sector
- **International comparison** is possible only for using ICT by individuals and enterprises. Eurostat database was used as a data source for international comparison.
