

Methodology of revision in 2017

- survey

System of nomenclatures TSKPstat in the quarterly statistical survey Ceny Stav 1-04 have been updated. There was a change in the list of construction work's representatives: the representative Nr. 105 - Joinery is canceled.

- calculation

The weighting scheme has been put together from results of construction production in 2011-2016. A method of chaining have been used for the revision. Aggregations of price indices have been put together in primary time series and have been converted by constants to secondary time series after that – **aggregations of price indices can not be put together** in the secondary time series. Price indices **based on the 2015 average** have been published since 2018.

The time series related to the time series (based on the 2015 average) are calculated anew.

- publication

Construction prices statistics is published on the CZSO web sites:

011041 Price indices of Construction works, price indices of Constructions and indices of Construction costs - quarterly time series.
