

21. HEALTH

Selected data on health are taken over from source materials of the Institute of Health Information and Statistics of the Czech Republic (IHIS CR), which is the administrator of the National Health Information System (NHIS) authorised by the Ministry of Health. The data published are for all **ministries in total**.

Data on the numbers of **physicians, including dentists** (full-time equivalent workers), are calculated as the sum of all full-time and part-time jobs of individual physicians of the health establishments converted according to the full number of working hours per week laid down for a given establishment or workplace. Since 2007 the numbers of physicians, including dentists, have been given involving contractual workers as well.

Contractual workers are workers working in a given health establishment on the basis of:

- a **contract** for work other than works described in their contract of employment (employees working on the basis of a contract on services, employees working on the basis of a contract for work); and
- a **contract** for work (according to the Civil Code or the Commercial Code).

Bed stock of hospitals and its use demonstrates selected indicators of the bed stock use, of the back-up by physicians and paramedics with professional qualifications, on medical staff workload, as well as information on movements of hospitalised patients.

Till 2011 the statistics of temporary incapacity for work due disease or injury was carried out by a statistical survey on rates of incapacity for work due to disease and injury by means of the state statistical questionnaire **Nem Úr 1-02**, results of which were supplemented with data from the administrative source of the Information System of the Czech Social Security Administration (CSSA). **Starting in 2012** the Czech Statistical Office has been providing data for the **Statistics of Temporary Incapacity for Work and Injury by processing of data from the administrative data source of the CSSA Information System**. Data prior 2011 are not comparable in full to data for next years.

The **average percentage of incapacity for work per year** = the number of calendar days of incapacity for work due to disease or injury x 100 / (the average number of the sickness-insured persons, x the number of calendar days in a reference period).
