

INTRODUCTION

On 1 July 2015, a new version of the [Public database \(VDB2\)](#) was launched – a brand new application which offers tables and graphs with improved structure and extended services. The previous version of the Public database (VDB1) was closed on 11 September 2015.

Statistical tables in the publication [Districts of the Czech Republic](#) have been processed since 31 October 2015 in the environment of the VDB2 only. Archives of the previous issues of this publication are not available any longer. Therefore a MS Excel 97-2003 file with exports from the VDB1 has been created. Exported tables are saved in respective sheets with time series since 2005 (if available). The spreadsheet opens on the sheet of „List of chapters“, which corresponds to the structure of deposited publications. In the same time the list enables switching individual sheets by active links.

We believe that you will appreciate new design of the Public database and obtain requested information. Apart from tables included into this publication, users can find data in other [predefined tables](#). They can also compile their own tables by means of [Customised selection](#).
